The demand for anesthesiologists outside of the operating room continues to grow as the number of minimally invasive procedures proliferates and the complexity of diagnostic procedures undertaken outside of the OR increase. Non-Operating Room Anesthesia is an easy-to-access, highly visual reference that facilitates an in-depth understanding of NORA procedures and protocols needed to minimize risk and complications and to maximize growth opportunities. Effectively assess and manage risks and differences in procedures through in-depth discussions addressing the unique challenges and issues associated with non-traditional settings. Review the most recent knowledge with updated coverage of the use of the electrophysiology lab (EPL) and cardiac catheterization laboratory (CCL) in the care of the critically ill patient; patient assessment; and anesthetic considerations. Prepare for varying anesthetic conditions in non-OR settings with in-depth discussions on communication, management, and laboratory preparation for anticipated concerns or complications. Glean all essential, up-to-date, need-to-know information about NORA with coverage that surpasses the depth and scope of review articles and other references. Focus on the practical guidance you need thanks to a user-friendly color-coded format, key points boxes, drug descriptions, checklist boxes (for monitors, equipment, and drugs), and over 400 color photos that help you visualize each procedure and setting.

The SAGES Manual of Perioperative Care in Minimally Invasive Surgery - Richard L. Whelan - 2006-01-16

The second SAGES (Society of American Gastrointestinal and Endoscopic Surgeons) manual was intended to be a companion piece for the successful ?rst SAGES manual, edited by Carol Scott-Conner, that was published more than 4 years ago. Originally, the goal was to concentrate on timely covered or often ignored aspects of the preoperative preparation of the patient and the operating room as well as the postoperative care of patients undergoing minimally in- sive operations. It was also our intention to include a section for each procedure where several different port placement schemes would be presented and brie?y discussed. Unique to this manual, the impact of the patient’s body habitus (short or long, narrow or wide) on port placement is also taken into account for many of the procedures. Also unique are chapters devoted to hypothermia, port wound closure, and the management of subcutaneous emphysema and abdominal wall hemorrhage caused by trocars. Naturally, the surgeon tends to focus on the technical aspects of the pro- dure, such as the operative tasks to be carried out, the order of operation, and the position of the surgeon and assistant. However, it is critical that the surgeon be aware that the CO pneumoperitoneum, far more so than laparotomy, results 2 in multiple physiologic alterations that, if

Surgical Care at the District Hospital - World Health Organization - 2003
Many patients who present to district (first-referral) level hospitals require surgical treatment for trauma obstetric abdominal or orthopaedic emergencies. Often surgery cannot be safely postponed to allow their transfer to a secondary or tertiary-level hospital but many district hospitals in developing countries have no specialist surgical teams and are staffed by medical nursing and paramedical personnel who perform a wide range of surgical procedures often with inadequate training. The quality of surgical and acute care is often further constrained by poor facilities inadequate low-technology apparatus and limited supplies of drugs materials and other essentials. The mission of the team responsible for Clinical Procedures in the World Health Organization Department of Essential Health Technologies (EHT) is to promote the quality of clinical care through the identification promotion and standardization of appropriate procedures equipment and materials particularly at district hospital level. WHO/BCT has identified education and training as a particular priority especially for non-specialist practitioners who practise surgery and anaesthesia. It has therefore developed Surgical Care at the District Hospital as a practical resource for individual practitioners and for use in undergraduate and postgraduate programmes in-service training and continuing medical education programmes. The manual is a successor of three earlier publications that are widely used throughout the world and that remain important reference texts: General Surgery at the District Hospital (WHO 1988) Surgery at the District Hospital: Obstetrics Gynaecology Orthopaedics and Traumatology (WHO 1991) Anaesthesia at the District Hospital (WHO 1998; second edition 2000). This new manual draws together material from these three publications into a single volume which includes new and updated material as well as material from Managing Complications in Pregnancy and Childbirth a Guide for Midwives and Doctors (WHO 2000). Link to the full training tool kit CD-ROM: WHO Integrated Management for Emergency and Essential Surgical Care (IMEESC) Toolkit CD-ROM Surgical Care at the District Hospital is a compact but comprehensive outline of modern surgical care focusing on fundamental precepts and practical techniques. The illustrations are clear instructive and appropriate. The authors are to be commended on a much improved new edition. Barry J. Manual of Vascular Access, Organ Donation, and Transplantation - R.L. Simmons - 2012-12-06
This book is a compilation of common and uncommon surgical and ancillary techniques that we have found useful in the multiorgan transplantation program at the University of Minnesota. Descriptions of these techniques are not available at a single source elsewhere. Use the book as a teaching aid, a source of workable techniques, and as a reference for individuals with relatively little experience in a particular area of transplantation. Because of the varying levels of expertise of our readers, vascular access is described in exquisite detail, as it is aimed at an audience of individuals who want to learn the fine points about how to prolong the function of shunts. The chapter on organ preservation is aimed at the surgeon or beginning technician who must learn how to do it from scratch—even the catalogue numbers of the necessary equipment are included. In contrast the chapters on heart, liver, and pancreas transplantation, while omitting fine points of suture technique, concentrate on the essential principles and safeguards. Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique. The chapters on cadaver organ donation are perhaps the most innovative. They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation. We hope that the book will become available to centers that, while not performing liver, pancreas, or heart transplants, wish to serve as donation centers.

Nursing Informatics - Marion J. Ball - 2013-11-11
Nursing, like other health-related professions, is information-intense. The quality of care a patient receives is based on the soundness of judgment exercised by the health care team. Underlying sound judgment is up-to-date information. Unless nurses have access to accurate and pertinent information, the care being rendered will not be of the highest standard. What is required is not necessarily more rapid and efficient information services. Modern technology can process immense amounts of data in the blink of an eye. What we in the health professions need are information systems that are more intelligent, systems that can integrate information from many sources, systems that analyze and synthesize information and display it so that it may be applied directly in patient care in other words, information that answers a question or even gives practical advice. In order to accomplish such objectives we need to establish the scientific and theoretical basis for the use of computing and information systems by health professionals. This is the research com ponent. In addition, there is the need for continued development and evaluation of practical information systems.
